INSTALLATION

The EYEBEAM System design radiators are supplied with European standard couplings, guaranteeing easy installation in any existing system. In case of vertical positioning the visual display must be kept on the right side while for horizontal positioning the visual display must be kept on the lower side.

FLEXIBILITY

All EYEBEAM models can be installed both horizontally and vertically for a maximum adaptability to the needs of each individual environment.

SAFETY

Since the EYEBEAM System design radiators are made of tempered glass they have the highest certification for safety glass, the insertion of a plastic adhesive film allows the glass to obtain the European UNI 12600 1B1 certification with safety performance equal to those of a shatter-proof laminated glass.

Their assembly also ensures an isolation level of electronic in class 2 and a protection level of IP 45 thus ensuring maximum safety even in humid environments, such as bathrooms, swimming pools, saunas etc.

Once the product has been installed, the specially designed brackets prevent inadvertent unhooking, in accordance with the German VDI 6036 safety regulations for radiators.

ACCESSORIES

Towel bar
Adaptable to the extent necessary and more bars can be fitted.

Hanger
Can be mounted in any position on the upper side.

THE DESIGN RADIATORS THAT MEETS THE NEEDS OF WARMTH AND COMFORT FOR ANY ENVIRONMENT

EYEBEAM®
CONTEMPORARY WARMTH

The SLIM SATIN Model is a design radiator with a minimal and linear look where efficiency and aesthetic value come together. SLIM SATIN is inspired by sleek and elegant shapes that can respond in a practical sense to the new needs of bathroom furniture. Thanks to its marked peculiarity, SLIM SATIN adapts easily to all spaces, from the most reduced and articulated to the wider ones, safeguarding them without renouncing to aesthetics. Its timeless design is embellished by the Satin finish, obtained from a complex and skilful glass working. This technique gives a matting effect of the plate, making it to the touch very similar to silk. The fusion of these elements give a piece of furniture of innate elegance that fits harmoniously in all environments, from the most modern to the more traditional architecture. Slim is available in three sizes, small, medium and large and only in the Electric System version.

WARM WELLNESS

Thanks to its heating system, the SLIM SATIN model allows to heat the environment mainly by irradiation, emitting long-wave infrared very similar to the rays emitted by the sun, which are perceived by the human body creating a condition of well-being.

This advanced system also allows you to directly heat the elements in the room which in turn re-send their heat into the environment.

SAVING

The design radiators allow to have a comfortable ambient temperature with a much lower air temperature than traditional systems, a degree less in air temperature corresponds to a saving of at least 7% of the energy consumption.

The Electric System design radiators have the most advanced technology, which allows the product itself to understand which is the most correct way to heat the environment avoiding energy waste, keeping the product surface temperature to a minimum and automatically placing itself in stand-by in front of sudden changes in temperature within the environment.

The EYEBEAM Electric System design radiators have state-of-the-art TOUCH SCREEN control system that allows to optimize the performance in combination with the remote control. The daily and weekly programmable Thermostat allows you to program the switching on and off for a flexible heating and the most suitable as possible to the needs of the end user.

The three pre-set temperature modes allow you to select, according to the size of the environment and the temperature you want to obtain, the heating mode that best suits the situation, avoiding energy waste.

All Eyebeam ErP radiators comply with the provisions of the Ecodesign Directive 2009/125/EC and the EU Regulation 2015/1188 for environment heaters.

ACCESSORIES

Accessories such as towel bars and hangers make them perfect in the bathroom or kitchen. The SLIM SATIN design radiators can be supplied with a remote control with LCD display to allow the best possible adaptation to the needs of the individual environment and user.

FINISHES AND CUSTOMIZATION

The range of SLIM SATIN design radiators is composed of 2 finishes, white and black but can be customized with special finishes and treatments.
